Re: Power Gems EB1800 Ballast

Gentlemen,

Happy Holidays and Best Wishes for the coming New Year. I just wanted take this opportunity to inform you of some recent experiences I had with your terrific EB1800W Ballast that went with us and worked in the Eureka area of Northern California.

As you know I've been a "Power Gems" guy for some time, however, it's always nice to be won over again on a product we've come trust and to be there for us. I can honestly say the Power Gems ballast we've purchased over the few years we've been around has been one of the best investments we've made.

Recently we were tasked to develop new lighting harnesses that would work in our 7' x 8' Elliptical Lighting Balloon as a Hybrid (4K Tungsten with 1 x 1.8K HMI) and the ability to fully change over at any time to HMI or Tungsten. The first day out one of the lighting balloons had 2 x 1.8K HMI's which fired up right away and proved to be too bright even while working during daylight hours. The second balloon light put up later that day worked as the Hybrid version at full power – both units ended working as Hybrids the next 5 days thereafter. These lighting balloons worked both as a bounce as well as being lit from within.

Lighting & Grip, Inc.

Our tech team had their hands full working in some unfriendly “balloon” areas of the forest and having to watch out for tree branches, widow maker limbs as well as sharp rocks that could have easily taken our lights out with the slightest breeze at any time, which thankfully did not happen.

Thanks to our EB1800 Power Gems Ballast the lighting balloons struck every time while working every day in a number of different rainy, damp and muddy locations “without fail”. Our balloon tech team worked with unprecedented confidence in our electronics and was able to focus on balloon placement and its safety during our work in the Redwoods and Sequoia’s locations.

On behalf of the Balloon Tech Team – Matt Garber and myself - Thank You Power Gems!

Sincerely,

A handwritten signature in black ink, reading 'Brian J. Glassman'.
